Project: Investment Portfolio Transaction Analysis

Prepared By: Huzefa Irfan Panchi

Date: 18/10/2025

1. Project Overview

The Investment Portfolio Transaction Analysis project aims to provide a comprehensive view of all investment transactions, enabling the organization to monitor account activities, identify trends, and generate accurate reports for decision-making and compliance purposes.

2. Business Objective

- Improve transparency and accuracy in tracking investment portfolio transactions.
- Facilitate data-driven decision-making for portfolio management and customer advisory services.
- To reduce manual analysis time by 60% and increase data accuracy through automated analytics.

3. Problem Statement

Currently, investment transaction data is scattered across multiple sources, making reconciliation and analysis time-consuming and error-prone. A centralized and structured analysis approach is required to enhance accuracy, efficiency, and reporting capabilities.

4. Scope

In Scope:

- Analysis of historical and current investment transactions.
- Reporting on account-level and portfolio-level metrics.
- Identification of trends, anomalies, and transaction patterns.

Out of Scope:

- Real-time transaction processing.
- Predictive AI-based forecasting.
- Integration with accounting or (Enterprise Resource Planning) ERP systems.

5. Stakeholders

- Portfolio Management Team: Provides transaction data and validates insights.
- Customer Service Team: Provides account and customer details.
- Senior Management: Reviews insights, uses dashboard for decisions
- Business Analysts: Requirement gathering, dashboard design, documentation

6. Business Requirements

Requirement ID	Description	Priority
BR-1	The system must display total portfolio value and returns.	High
BR-1	The dashboard should categorize transactions by asset type (e.g., stocks, bonds, mutual funds).	High
BR-1	The system must allow filtering by date, investment type, and client.	Medium
BR-1	The dashboard should visualize transaction trends over time.	High
BR-1	Include KPIs like ROI, total gain/loss, and diversification ratio.	High

7. Data Source Details

Data source	Description	File Name	Key fields/ Columns	Update Frequency	Owner
Investment Portfolio Transactions	Historical and current transactions including buy/sell trades, deposits, and withdrawals	Portfolio_Transactions.xlsx	Transaction.ID , Account_ID, Date, Instrument, Type, Quantity, Price, Amount	Daily / Monthly	Portfolio Management Team
Customer & Account Details	Information about customers and their accounts for reconciliation and reporting	Customer_Account_Details.xlsx	Account_ID, Customer_Name, Account_Type , Date_Opened, Account_Status	Monthly	Customer Service Team

8. KPIs / Success Metrics

- Reduction in manual reconciliation time by 60%.
- Accuracy of transaction reporting $\geq 90\%$.
- Timely generation of monthly and quarterly portfolio reports.
- Detection of discrepancies or anomalies within 24 hours.

9. Assumptions / Constraints

Assumptions:

- Historical transaction data is available in structured Excel format.
- Stakeholders will provide timely feedback for dashboard improvement.

Constraints:

- Limited integration with live market APIs.
- Data refresh will be manual (not real-time).
